

Exploratory SOD Data

Tina Cheng

April 7, 2017

Exploratory figures

We looked at Jessica's Sudden Oak Death data collected on the FERP for tanoak during winter and spring quarter 2017. Jessica used Greg Gilbert's method for assessing SOD severity on a scale of 0 - 5, 0 = no impact, 5 = mortality.

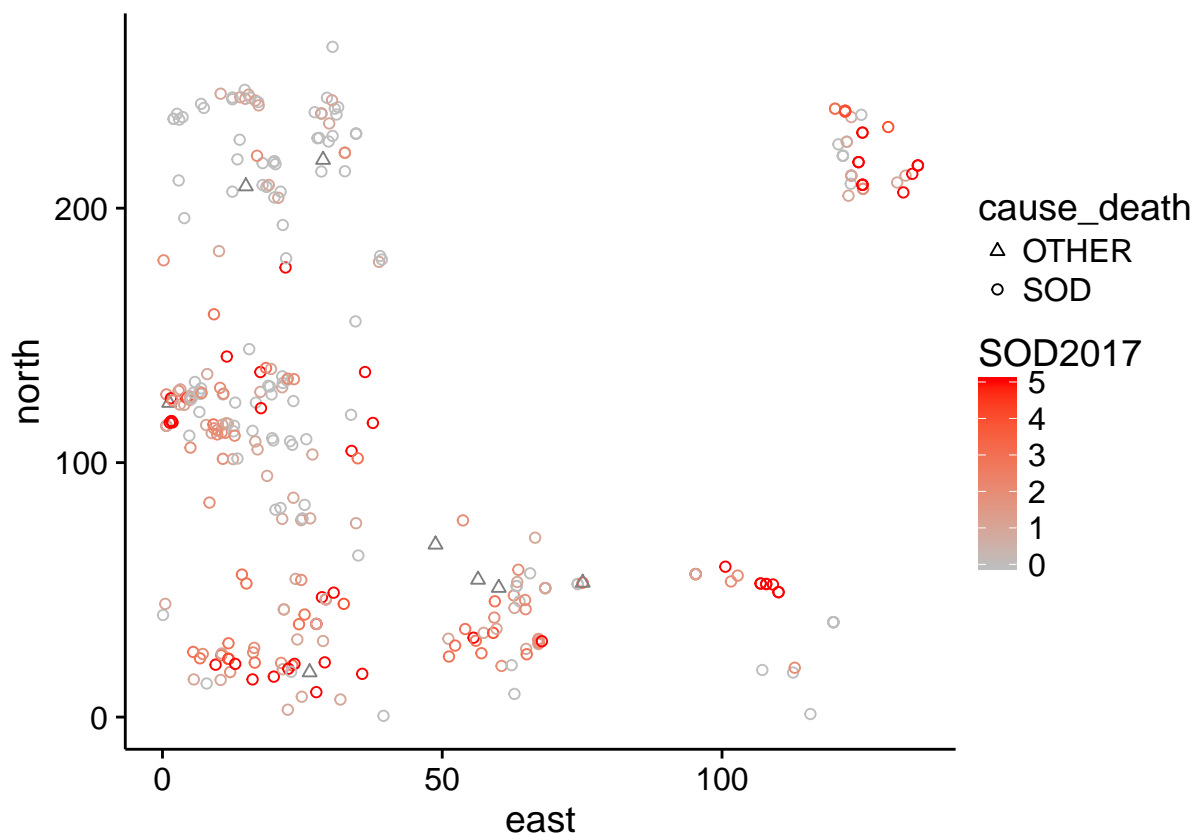

Figure 1: Measures of Sudden Oak Death (SOD) on the FERP in 2017 for Tanoak. Color gradient represents severity of SOD by tree, with red indicating the most severe impact (death). Non-SOD related deaths are indicated by triangle points.
